

Family Care Handoff Planner

A blank page for deciding what a helper should be able to find.

Start with the handoff, not the tag.

Keep this worksheet free of real names, phone numbers, addresses, schedules, account details, and health information. Use role labels and general notes only.

1. Page owner

Which family role will review the linked page when something changes?

2. Contact route

List roles only, such as primary family contact and alternate. Keep actual details on the page service.

3. What belongs on the page?

Choose practical, non-medical notes intended for a helper who taps the tag.

4. What stays in another channel?

Name categories that should remain in the family or care team's existing process.

5. Tag placement and review

Choose an agreed place for the tag. Set a review rhythm or a change that should trigger one.

Before the handoff

- ☐ The family-selected URL opens on a compatible smartphone.
- ☐ The intended helper knows where the tag is and what it opens.
- ☐ The family knows who owns the page and when it was last checked.

Planning aid only. The NFC tag opens a destination you supply; it does not host a page or send an alert.
