

Framework Reference Ownership Map

One clear entry page. A named owner. A review date the team can keep.

Start with the [general documentation index](#). Use this map to make the route easy to find and the responsibility clear.

01 The entry point

Resource index or page name
Approved URL or path to the index
Teams it serves
Workshop, onboarding, or moment it supports

02 Ownership and access

Content owner	Backup owner
Source system	Who can access it?
Last reviewed	Next review date

03 Put it into the handoff

Where will the physical tag live?
How will the team confirm the destination is still current?
Who handles a broken link or access request?

Pilot check Before rollout, tap-test the page on a compatible phone, confirm its access rules, name the person who owns updates, and set the next review date.

Keep code, credentials, customer data, access tokens, and restricted architecture in your organization's approved systems. This worksheet organizes a resource handoff; it does not secure or maintain the destination for you.
