

Waste Container Access Point Map

Keep the record in your system.
Put a clear route at the container.

Map one approved destination for one container. Keep passwords, access tokens, private contact details, sensitive site information, and regulated waste specifics out of public links and this worksheet.

Container and destination

Container ID / label	Approved attachment location
Approved destination URL or system reference	Resource owner

People and access test

Intended users	Test date	Review date
Phone / device tested	Network / sign-in conditions	Tested by

Fallback and ownership

Approved fallback route when phone, connection, permission, or page is unavailable
Who reviews the destination, and how will a change be checked?

Before placing the tag

Confirm the actual tag and mounting requirements for this container. Test access with intended devices and permissions. Keep approved labels, records, training, and fallback routes in force.

This planning worksheet is not a waste determination, pickup booking, inspection record, shipping paper, or compliance certificate. The NFC tag opens a customer-selected destination; it does not track the container or schedule service.
